

PAULL
OFFICE

PG2
Series

A logical, innovative

PG₂

is a casegoods-based desking system featuring thermofused color surfaces on all cases and beautifully matched Eastern Hard Maple veneer on worksurfaces and tops. Solid Maple lumber banding shaped in one of eight distinct edge details further

enhances this innovative desking system. A comprehensive vocabulary of free-standing furniture, as well as non-handed components, allow for simple specification of both private office and open-

plan environments. Functional versatility is not the only strongpoint of PG₂, an array of options including wood finish, thermofused color cases, and hardware make PG₂ a logical choice.

The PG₂ Desking System was designed by Alan Jay Paull, for Taylor Desk, as an extension to the Paull Group Series of all-wood executive furniture currently being offered. Working with both PG₂ and Paull Group, a broad spectrum of client requirements can be met from a single source, Taylor Desk.

A sensible, uncomplicated open-plan

PG2 is designed not only for private offices, but it is also ideally suited for multi-user, open-plan environments without the complicated specifying or installation required by most conventional panel-based systems. Overhead Storage Units function as partitioning units, a key element for open-plan settings.

The PG2 Accessory Wall offers an intelligent solution for paper management and organizing individual workspaces. Filing units are equipped with full extension, progressive action Accuride® suspensions and accommodate letter and/or legal size filing. Computer support and wire management accessories are available in several formats.

Style and individuality are easily catered

PG2 addresses the need for individual style by offering several design features: three thermofused color case surfaces; Maple worksurfaces and tops in several finishes and eight edge details; three hardware designs

and finishes; and Maple veneer drawer fronts, hinged doors, and desk modesty panel choices. These options further enhance the PG2 office and ensure your personal style preferences are met.

Shown at left, Khaki case surfaces with Cherry on Maple finish tops, Bullnose edge detail, Arc Pull in Satin Nickel finish, and optional Maple veneer modesty panel.

Define your personal space . . .

Privacy Panels define personal space. They may be used at a single workstation or incorporated into a multi-user work environment to encourage interaction with co-workers.

Privacy Panels also serve as a foundation to support the PG2 Accessory Wall, a system of organizing elements. Acoustical Tack Panels may be specified for Privacy Panels and used independently or in combination with the Accessory Wall. Transaction Tops are available to further enhance Privacy Panels and provide additional surface space.

Recognizing your need for change . . .

PG2 has the ability to adapt as requirements change. A corner workstation configuration is enhanced and given a new focus with the addition of a Mobile Meeting Table.

By incorporating a P-Top Conferencing Table Desk and Overhead Storage, the original corner workstation is reconfigured for a private corner office. Non-handed components ensure complete flexibility.

A versatile, well-designed, simple

The extensive **system vocabulary** of PG2 components are the building blocks to create individual workspaces. The versatility of PG2 is demonstrated through its varied options. Eastern Hard Maple veneer worksurfaces and tops are edge banded with solid Maple lumber and available in several standard Taylor **finishes** and eight distinct **edge details**. Casegoods may be specified in Jet Black, Pearl Gray, or Khaki thermofused **color surfaces**.

Hardware is standard and offered in three **hardware** designs finished in Matte Black, Polished Chrome, or Satin Nickel. Maple veneer **drawer fronts**, hinged doors, and desk modesty panels are also available.

About Thermofused Color Surfaces

Thermofused Color Surfaces are created by saturating a solid color overlay with resins. Through a process of heat and pressure, the color is fused to, and becomes part of the panel. The panel is hard, clear, and non-porous, as well as highly resistant to virtually all stains, chemicals, scratches, radiant heat, and moisture.

Drawer Front Options

Drawer fronts are standard with thermofused color surfaces or also available with Maple veneer in several standard wood finishes.
